a Causality and leakage audit of the frozen evaluation protocol

A1	PASS	No future target enters X (target y(t+4) used only as label)
A10	PASS	GBR data do not determine tau
A11	PASS	GCBD observations are not used
A12	PASS	Static features are not falsely claimed to be used
A2	PASS	All dynamic derived features are trailing
A3	PASS	4wk/12wk cumulative HotSpot contain no future observations
A4	PASS	Monthly variables use only causally available values
A5	PASS	No linear interpolation introduces future monthly information
A6	PASS	Climatology uses only data available by end of SCS training
A7	PASS	Normalization uses SCS training period only
A8	PASS	GBR data do not alter model weights
A9	PASS	GBR data do not alter normalization

All 12 audit checks PASS: no future-target leakage, no target-domain fitting, thresholds and normalization frozen a priori.
