(a) Residual R vs mechanism variables
(partial | current DHW; * FDR q<0.05; dark=thermal, red=nonthermal)

(b) Nested incremental explanation of R
M0: DHW → M1: +thermal trajectory → M2: +nonthermal

(c) Mechanism contributions by basin
(partial association with R)

(d) Incremental severe-risk ranking
PersA → +thermal → +context → TSAR (thin = SCS)
